On Tunisia

Note to the Reader

We thank Mr. G. Bouvin who, as the editor responsible, makes it possible for us to legally publish and distribute this publication. We wish to point out that Mr. G. Bouvin is not responsible for the political content of the articles and, more generally, for the programmatic positions defended in our press.

Presentation

This document appears simultaneously in three languages: English, French and Czech. Not because we are particularly gifted translators, but because it is the result of a collective effort from its conception. This project has been carried out by the comrades of the KpK, Mouvement Communiste, and others. We hope that this, as the first stage of a common politics, will be confirmed and amplified as a step toward the unification and centralization of communists.

Before the Fall of Ben
INTRODUCTION

For over a month, the Tunisian state faced a spontaneous social conflagration following the suicide of a young peddler of Sidi Bouzid, in the center-west part of the country. First there were sit-ins, then demonstrations and riots spread from this little-developed region throughout the country and then to the capital, Tunis, and to the more economically dynamic coastal area.

When proletarians are willing to defy the forces of repression with bare hands and not retreat from the bullets of the police, they bring to oppositional ferment a determination that can shake state power, despite the more than 100 deaths reported. This is exactly what happened in Sidi Bouzid during the final days of December 2010 and in the first half of January 2011. Thus, in three stages, the movement which began in the south spread to all regions of Tunisia, to finally conclude in Tunis beginning on January 11.

The intervention of the proletariat in the Tunisian political scene forced a redistribution of the cards of executive power. The former dictator Ben Ali had to leave Tunisia on January 14, thus becoming the first leader of an Arab country to leave power under pressure from the street, and the opposition parties and other major players in the
Tunisian government are now trying to take their places in a new government. But where workers' strikes are concerned, none had affected the country prior the fall of Ben Ali. After that, first in the public sector and then in the private sector, strikes broke out, and the wind of insubordination continues to blow, even if the UGTT (Union Generale des Travailleurs Tunisiens, the official state-linked union) is still containing working-class potential.

The text thus comprises:

A detailed chronology,
An economic overview,
An historical overview,
An analysis of the complex relations between the UGTT and the RCD,
A study on the strength of the Islamists,
An assessment of the movement in the larger society,
An analysis of workers' struggles,
A tentative conclusion,
Bibliography

CHRONOLOGY

The fall of Ben Ali

December 17: Bouazizi Mohamed, a young street vendor of Sidi Bouzid (West Central Tunisia), 265 km from Tunis, protests against the seizure of his goods by the police and sets himself afire. The troubles begin the following day, December 18. When he dies on Jan. 4, a crowd of 5000 people attends his burial.

19-20 December: Clashes between police and young protesters' “right to work” in Sidi Bouzid and in the town near Meknessi. Dozens are arrested, according to the International Federation of Human Rights (IFHR).

December 24: The disorders extend to Bouzayane Menzel (60 km from Sidi Bouzid) where police fire on protesters, killing two and injuring others. It is important to note that the repression and provocations of the police (especially the services under the thumb of Ben Ali) have been particularly deadly in this part of the country. This geographical area, like the south and part of the north, is one of the less developed regions of the country.

December 28: In the wake of new protests against unemployment and the high cost of living in several cities, including Tunis, Ben Ali denounces a "political instrumentalization" of the disorders. To try to defuse the uprising, he dismisses the governor of Sidi Bouzid on the 30th.

January 3: Demonstration in Thala (Central West). The violence is marked by looting and the burning of government buildings. Numerous arrests. Violence also in Saida, near Sidi
Bouzid.

January 6: Thousands of lawyers go on strike and demonstrate.

January 8-10: Bloody riots in Kasserine, capital of Thala, where the army is deployed around government buildings, and in Regueb near Sidi Bouzid. 21 are dead in riots, according to the authorities, more than 50 according to the UGTT (Union Generale des Travailleurs Tunisiens). Further clashes in Kairouan, the local capital of the central region; demonstrations beginning at the University of Rakkada escalate into clashes with police in the city center and others are reported in communities in this region, also in the grip of unemployment. The fifth suicide since December 17 occurs; an unemployed university graduate, Alla Hidouri, 23, commits suicide near Sidi Bouzid; he was shot in the leg in clashes that left two dead and several injured on Dec. 24 in Menzel Bouazaine. Further concessions by Ben Ali in a televised speech in which he denounces terrorist acts, while promising to create 300,000 more jobs by 2012.

January 11: The violence continues in Kasserine. Clashes erupt in the evening for the first time in a suburb of Tunis. Demonstrations by artists and regime opponents are repressed in the capital. Closing of schools and universities.

January 12: The Prime Minister announces the dismissal of the Interior Minister and the release of those arrested, except those involved in acts of vandalism, and the formation of a commission of inquiry into corruption. The army is deployed in Ettadhamen (western suburbs) and in Tunis, where police use tear gas. Two civilians are killed by police in Douz (south) at a demonstration. Five demonstrators are shot and wounded in clashes in Sfax (Southeast) Arrest of the leader of the Communist Party of Tunisian Workers (the PCOT, which is banned). This is the first political leader arrested since the riots began. A night curfew is declared in Tunis and its suburbs. There were already a number of suicide deaths in the months before that of Mohamed Bouazizi, especially by electric shock. The EU condemns the disproportionate use of force and the UN calls on the Tunisian government to hold "credible, independent" investigations of the violence.

January 13: Tunis is tightly patrolled by special forces after the first night of curfew as clashes take place in the suburbs of the capital, and particularly in the city of Ettadhamen, where repression results in at least one death. No official figures have been published on the violence that took place in this city and in Intilaka, home to some 30,000 inhabitants and located about 15 km from the center of Tunis. The army withdraws from the capital, where it had deployed 24 hours earlier, while the country is plunged into an unprecedented challenge to the regime. On the same day, armored units and police intervention replace the army on Avenue Habib Bourguiba, a central artery, and in Barcelona Square. Buses filled with riot police are parked in the side streets leading to the main avenue, and enhanced security forces can be seen on the road to the presidential palace in Carthage. Armored cars of the special intervention police and army trucks are also deployed in the plush northern suburbs of Tunis. The withdrawal of the army comes after violent clashes between security forces and youth on Wednesday night and into Thursday in two neighborhoods on the outskirts of Tunis, despite a night curfew imposed
for an indefinite period, the first such measure since the coming to power of Ben Ali (also known as ZABA, his full initials) in 1987. This day was apparently particularly deadly, the number of protesters shot dead possibly exceeding 30 people across the country, almost half of them in Tunis. According to several witness accounts, the shooters positioned themselves on terraces and deliberately cut down their victims. The government of President Ben Ali, however, tries to calm the situation with the dismissal of the Interior Minister and with the release of all persons arrested, to "except those involved in acts of vandalism." On the campus of the University of Tunis, teachers gather to protest the murder of a professor of computer science, Bettahar Hatem, a French-Tunisian, who was killed the day before by police fire in Douz, in the south of the country. Following the peaceful march in response to the death of a receptionist in the resort town of Hammamet (60 km south of Tunis) people erect barricades while others loot a seaside resort. Destruction of a police station and a local office of the RDC. According to the IFHR, at least 58 people had been killed to that point in the unrest in Tunisia, since mid-December, and the organization denounces "a continuing massacre".

January 14: A rally begins in the morning on Avenue Habib Bourguiba, attracting all social classes. Without slogans or banners or guiding organization, the march begins in front of the Municipal Theatre to the Ministry of Interior. The protesters chant: "Rally, rally, until the fall of the government! The gathering turns into a riot, with violent clashes between demonstrators and riot police. Army tanks are deployed to the Ministries of Interior and Foreign Affairs, as well as to the national television and radio stations. Around 2 PM, Prime Minister Ghannouchi announces: "The head of state has decided, in the context of the initiatives he announced on Thursday night, to dissolve the government and to call on the Prime Minister to propose the formation of a new government, and to organize early parliamentary elections within the next six months." A state of emergency is declared. The army controls the airport, and Tunisian airspace is closed. Mohammed Ghannouchi says on TV at 5 PM that he will be acting as interim president in the place of Ben Ali, who has left the country. That night, Ben Ali fled, becoming the first leader of an Arab country to leave power under pressure from the street. Later that night, Ben Ali arrives in Jeddah, Saudi Arabia.

**Establishment of the new government**

January 15: Security forces are set up in the heart of the city. That Saturday, Tunisian Prime Minister-designate Mohammed Ghannouchi declares, “The authorities are making every effort to restore order in the country, in whose opinion the continuation of the looting is "unacceptable". Police and supporters of the former Tunisian President Ben Ali are implicated in attacks and abuses against the population in Tunis, according to the witness report of a French diplomat. The head of the Tunisian parliament, Fouad Mebazaa, is sworn in as interim president of Tunisia and states that "no one will be excluded" from the political process. Looting of houses, some owned by the Trabelsi, the in-laws of the fallen president, take place in La Marsa, a suburb twenty miles north of Tunis.

January 16: The curfew is reduced by one hour in Tunis. But clashes erupt in the
afternoon in the center of the city. The army storms the presidential palace in Carthage, where elements of the presidential guard of Ben Ali are holed up. Police on the grounds of the Ecole des Hautes Etudes Commerciales (the Business School), near the presidential palace, call on the army to rescue them. Two snipers are killed by the army, in the city center in the early phase of clashes between armed militia and regular forces. Somewhat earlier, Ben Ali’s former security chief, General Ali Seriate, is arrested and accused of being responsible for atrocities against the population. A nephew of Ben Ali is detained by the army in central Tunisia on Saturday night. To deal with the threats and looting of the the night before, vigilance committees are set up and spread quickly in various neighborhoods, organizing rounds to protect the inhabitants. Several witnesses attribute the looting and atrocities in recent days to members of the security apparatus linked to Ben Ali, who seek to sow panic and to set the stage for his return. "We must not overlook the power to inflict harm of the presidential security force headed by Ali Seriate; it had thousands of followers of Ben Ali." The Prime Minister gathers together representatives of the political parties and from civil society to appoint people to guide the transition process until the elections.

January 17: "It has been decided by consensus to sideline the pro-government parties. The new government will include representatives from the Ettajdid movement, from the PDP, from the Democratic Front for Labor and Freedom, as well as independent personalities. "These formations were part of the legal opposition. The three parties had demanded a general amnesty for all political prisoners.”

January 18: Mohammed Ghannouchi announces the formation of a government of national unity, the release of all prisoners of conscience, total freedom of information and the lifting of the ban on all non-governmental organizations including the LTDH.

January 19: On Wednesday, the interim president delivers his first speech since taking office on the evening of a new day of protests. "I commit the transitional government to overseeing a complete break with the past,” he said. The day before, he had decided to leave the RCD (Rassemblement Constitutionnel Démocratique, the renamed ruling party since independence) with Prime Minister Ghannouchi. Fouad Mebazaa tried to calm things down, committing himself to grant all the legitimate aspirations of the uprising. He promised an imminent general amnesty, total freedom of information, the independence of the judiciary and the separation between the state and the party. The new authorities multiply their goodwill gestures to the street. The new Minister of Development, Najib Chebbi, from the ranks of the opposition, announces that all political detainees, including members of the banned Islamist movement Ennahda, have been released.

Thousands of Tunisians once again take to the streets of Tunis, Sidi Bouzid, Regueb and Kasserine to demand the removal of the figures of the old regime’s national unity government. In all, four members of the new team resigned the day before, dissatisfied with its composition. "The population made sacrifices, "said Mustapha Ben Jaafar, leader of the Democratic Forum for Labour and Liberties and one of the resigning ministers. "Tunisians are not ready to return home by giving a blank check to a team that is not completely cleansed of legacy of Ben Ali.” The curfew in force since Friday is relaxed.
January 20: In Tunis, a thousand people protest outside the headquarters of the RCD to demand the resignation of the government. The army fires warning shots to deter demonstrators from climbing the wall. The protesters manage to reach the interior ministry and continue their march to the headquarters of the RCD, passing through the police cordon on Avenue Habib Bourguiba without violence. The “street” and part of the opposition question the presence of eight members of the former Ben Ali entourage in the transitional government formed Monday, January 16.

January 28: The demonstrators, who had been camping for days outside the offices of the Prime Minister on the place de la Kasbah, are removed by police. The anti-riot units use tear gas against demonstrators gathered under the windows of the office of Prime Minister. At least five people are injured during the clashes. An unusual morning silence has prevailed since the beginning of the week at the Kasbah, where hundreds of protesters are again camped under the windows of the seat of the government to discuss in small groups the next step for their movement. Mohammed Ghannouchi, wants to meet the protesters laying siege to the government. Consultations are held in the morning between union representatives and demonstrators. The general secretary of the UGTT Abdessalam Jrad speaks with Ghannouchi, who accepts the principle of a meeting with the protesters.

The UGTT tries to convince the demonstrators to return to their provinces, following the formation the night before of a transitional government cleansed of the principal caciques of the Ben Ali regime, which the trade union had tacitly endorsed. Five of the seven former ministers of the last government of Ben Ali are replaced by technocrats and independent persons not known to the public. But the retention of Prime Minister Ghannouchi is challenged by the most radical fringe among the demonstrators. "The majority wants to continue to a full cleaning," said one among the approximately 300 demonstrators, mostly provincials, who camped at the Kasbah.

After singing the national anthem and raising the Tunisian flag as they have done every morning, the protesters discuss what to think and what to do. The UGTT will participate in mid-day in a meeting with the opposition; the Bar Association and other components of civil society are trying to adopt a common position on the new government, according to Fethi Belhaj, spokesman for the nationalist and progressive current. Mouldi Jandoubi, executive member of the UGTT, says: "A government is in place. I believe that’s the right attitude. The economy must start up again, and people have to go back to work."

Provisional Epilogue

February 15: A group of 28 parties and organizations of different political views (Ennahdha, the Front of January 14, etc. and the UGTT) call on February 15 for the

---

1 Composed of the League of the Labour Left, the Movement of Nasserite Unionists, the Movement of Nationalist Democrats (Al-Watad), the Baathist current, the Independent Left, the Communist Party of Tunisian Workers (PCOT), the Labour Party and the Democratic and Patriotic Labor Party (PGWPP).
establishment of the Council for the Protection of the Revolution. This body seeks to pay homage to those who lost their lives, and to maintain the aspirations of the Tunisian people.

February 27: Ghannouchi announces his resignation as Prime Minister; he calls on Tunisians to protect the revolution against all those attempting to cause its failure, and to confront the violence and looting committed by its enemies. That evening Mr. Beji Caid Essebsi is appointed as Prime Minister. An old warhorse, 84 years old, he had already been in the colonial administration, as well as a minister under Bourguiba and Ben Ali.

March 1: The NCPC calls on the interim president of the republic to dissolve the provisional government and to initiate consultations "to ensure a national consensus around the choice of a prime minister and to form a provisional government to manage ongoing affairs, having members known for their competence and not involved with the former regime." He says "it has been proposed, in response to the draft decree presented by the interim President of the Republic, to oversee the National Council for the Protection of the Revolution, setting its objectives, composition and the conduct of its work ... in order to elect a constituent assembly that will be responsible for drafting the new constitution of the Republic and for managing the transitional stage."

March 9: A court in Tunis on Wednesday announces the dissolution of the RCD, causing an explosion of joy in the room. Already suspended on Feb. 6 from any activity, the CD, founded on February 27, 1988 by Ben Ali, claimed more than two million members out of more than 10 million people.

March 12: The Tunisian Press Agency (TAP) announces a curfew imposed on the evening of Saturday, March 12 in the town of Metlaoui (south) after incidents on Friday and Saturday that left two dead and over 20 injured during clashes between locals over the issue of jobs. Clashes erupted following the posting of false job offers at the Gafsa Phosphate Company (Compagnie des Phosphates de Gafsa) (CPG), proposing quotas on a clan basis. The unrest continues Friday and Saturday, forcing authorities to declare a curfew. Units of the Guard and the National Army intervene, make arrests, and seize 16 hunting rifles. In 2008, the Gafsa mining region was shaken by a lengthy strike, severely repressed by the regime of Ben Ali. The workers had revolted against massive layoffs at the CPG. The company had gone in a few months from 15000 jobs to 5000, due to restructuring and modernization. In the same period in Ksar Hellal (20 km south of Monastir), fights between locals and immigrants from the interior had resulted in the destruction of the makeshift homes of immigrants, who had come to work in the textile mills, as well as their return home.

March 14: The Tunisian government refuses to legalize five parties, including three Islamist ones: Hizb-ut-Tahrir (Liberation Party), As-Salam (Peace) and the Sunni party (the other two are Free and Democratic People's Party and the Liberal Democratic Party of Tunisia), determining that they were not founded on democratic principles. Three other parties are legalized: the Party of Justice and Freedom, the Party of the Future for
Development and Democracy, and the Movement of Democratic Patriots.

March 17: Hillary Clinton meets with the president. She assured him of U.S. support for Tunisia and for a successful transition. Meanwhile tens of Ettahrir Islamist party activists express their aim of expelling American interests from Tunisian territory, speaking of "an occupation and of an American massacre of the Tunisian population.'

March 21: Many Tunisian NGOs (ATFD, LTDH, etc.) call for an increased presence of civil society in the interior regions. In keeping with this, two new sections of the ATFD will be established in Kairouan and Gafsa. The same goes for the LTDH, which plans to open branches in all parts of the country, in order to collect citizens’ complaints.

March 24: People sitting in for two weeks in the Kasbah Square are arrested for assault and for insulting aides of the Prime Minister.

March 28: The Tunis Appellate Court turns down the appeal of the RCD; the party is dissolved for good.

March 29: The curfew in the city of Metlaouï is set from 10 PM to 5 AM instead of 7 PM to 5 AM.

March 31: Less than a hundred people demonstrate on Thursday in the center of Tunis to protest the window dressing of the political transition and to demand real change.

April 1: The government must approve several bills supporting businesses, agriculture and fisheries, for jobs (the creation of 20,000 positions in the public sector, the creation of internships and increased aid for the unemployed) and for regional development (restructuring of the budget allocations to regional and local authorities). The government also calls on Tunisians to return to work and redouble their efforts. The Avenue Habib Bourguiba is the scene of lively demonstrations. The demonstrators, called out by the E'tahrir Party, had just left the mosques after prayers. Their demands are for religious freedom (mainly for the wearing of the scarf (hijab). The Financial Markets Authority (AMF), established to monitor the stock exchange, decides to terminate the business listing of 123 Tunisian companies presumed to be involved in numerous cases of illegality by the Trabelsi-Ben Ali clan in recent years. The number of Tunisians from Kasserine fleeing Libya is estimated at over 2000 people; the authorities decide today to expedite social services to them such as free access to health care, low-cost loans and automatic enrollment of their children in the nearest schools.

April 4: Silvio Berlusconi announces that a technical committee of the Ministries of the Interior of Tunisia and Italy will begin an investigation of illegal immigration, after his meeting with the Prime Minister of the Provisional Government Beji Caid Essebsi.

April 5: Following protests from environmentalists and accusations of being in the hands of the Trabelsi family, the Afripaper factory in Chebika (Kairouan) decides to close its doors. The Franco-Tunisian Oil Company ceases operations (following British Gas) in the wake of repeated sit-ins by locals demanding jobs and more development in the Bir
Lytayim region near Sfax. This in spite of an agreement between locals and the company for the hiring of five graduates and grants of 5,000 dinars to twenty others for various projects, in addition to 250,000 dinars for the installation of drinking water for 200 families.

April 8: The Prime Minister announces the creation of 60,000 jobs: 20,000 in the civil service; 20,000 in other state institutions (military and security); 20,000 in the private sector.

April 11: The supreme body for the realization of the goals of the revolution, political reform and a democratic transition approves Article 15 of the law decreed for the election of the National Constituent Assembly, which prohibits members of the dissolved RCD from running for the National Constituent Assembly. Gender parity is also adopted.

April 14: The UNHCR reports that more than 500 Libyans, mostly Berbers, have fled the conflict in western Libya and found refuge in the region of Dehiba the south in the south; beginning April 7, the Minister of Trade and Tourism Houas Mehdi says the prices of consumer staples (cereals and flour, vegetable oil, skimmed milk, tomato paste and sugar) will not increase in the coming period, noting the importance the government attaches to the provisional General Compensation Fund (GCF). Compensation would reach 1 256 million dinars.

May 14: The Tunisian Labour Party, the political expression of the UGTT, announces Saturday, May 14, 2011, its entry into the public arena. Its goal is to gather and built reinforcements for a progressive republican bloc. The "Labourites" cast a wide net, among voters from the center-right to the far left.

ECONOMIC OVERVIEW

Presentation

Beginning as a semi-colonial economy at independence in 1956, based on mining (phosphates of the Gafsa company) and the processing of agricultural raw materials (olive oil), with little tourism (52,700 visitors in 1962), and a single new industry (the North African Chemical Industries based in Gabes), Tunisia has developed since 1975, becoming one of the first countries to receive relocating European, and first of all French firms. Relevant sectors were mainly textiles and electronics (wiring).

These sectors, after 30 years, were stalled by competition from Asia and other countries with lower labor costs. Tunisia thus began to host companies in more skilled sectors,

---

2 This is a first in the Arab world. This provision provides that any list must include alternate male and female candidates at the risk of invalidation in case of non-compliance.
while trying, in its traditional sectors, to go up-market by benefiting from its geographical proximity to Europe (as in the case of the outsourcing of automobile production) or by the creation of an Airbus parts assembly plant. The economy is heavily dependent on trade with Europe. The slowdown of the recovery in the Euro area is the main risk to which the country is exposed, while Europe is entering a period of fiscal crisis, flowing from the critical level of indebtedness of some of its member countries and a slowdown in fiscal stimulus.

**Some statistics on Tunisia (2009)**

Population: 10,440,000  
Urban population: 65.9%  
Rural population: 34.1%  
Population 0-14 years: 24%; from 15 to 30 years: 26%; from 31 to 64 years: 42.5%  
Life expectancy: 74.5 years  
Birth rate per 1000: 17.7  
Mortality rate per 1000: 5.7  
School Enrollment: (6-14 years): 94.2% girls, boys 94.7%  
Educational attainment of 10-year-olds and up: None: 19.5% Finished Primary School: 33.6% Finished Secondary School: 36.1% University: 10.8  
Share of households with: Electricity: 99.5%; Running water: 85.3%; TV: 96.7% Fixed Telephone: 26.1%; Mobile Phone: 89.2%; Personal computer: 14.4%. Car: 22.7%  
GDP: $ 43.9 billion; GDP per capita: $4,160

"The Tunisian economy was characterized by the dominance of the public sector, especially in industry, agriculture and services. However, since the mid-1980s, a major restructuring program has been established for the national economy," recalled Miloudi El Ghobentini at the Rabat congress in early 2010. He continued: "The country has privatized all state-owned enterprises operating in industrial production and services, which made possible the emergence of a market economy more integrated into the global economy."

The restructuring undertaken by the Ben Ali regime to reduce the domain of the state seriously contributed to reducing the new public sector jobs for young graduates. Many of them turned to the informal economy. Miloudi El Ghobentini, then the director of the Tunisian National Agency for Employment, speaking at the above-mentioned Rabat conference, summarized: "In Tunisia, the state no longer creates many jobs (only 8 to 10% of jobs created). The state has privatized almost all firms producing goods and services and has fully withdrawn from the market."

Indeed, more than half the state budget for job creation is dedicated to the formation of micro-enterprises through the Tunisian Bank of Solidarity. According to a study conducted in 2006 by the World Bank and the by Ministry of Employment and Professional Insertion of Youth, the number of jobs created is very low. The distribution of beneficiaries by age, shows that about 48% of them are 30-39 years old and 26% between 18 and 30. Tunisian capitalism is flourishing despite the consequences of the so-
called sub prime crisis cycle of 2008. By far the richest country in the region except for Israel, Tunisia manifests the general conditions of capitalist production, quite close to those in the bottom third of the countries in the OECD, an organization that Tunis has wanted to join for a long time.

But in dealing with any presentation of official data, one must necessarily examine their credibility. Asked about this in December 2005 by Florence Beaugé, Ben Mahmoud Romdhane, a bourgeois economist and a professor of economics at the University of Tunis who is opposed to the regime and a supporter of democratization, said:

"Contrary to what some say, the figures I have are reliable. It is true that we can give them a tendentious interpretation, hide them or defer their publication. But, to my knowledge, there are no falsified numbers. If Tunisia did that, it would lose credibility with the international community, particularly the World Bank and the IMF. And then there is an interrelation between the numbers. Falsification would be noticed. Tunisians often complain that it’s the World Bank and IMF which run the country. For my part, I say that in a regime without real statistics, fortunately those two institutions are there! At least in terms of macroeconomic management, there is a certain rigor. The IMF, through its agreements with the Tunisian government, encourages it to publish information by fixed dates. Reports from the World Bank and IMF on Tunisia are one of the sources of essential information. Without them, where the banking and financial system are concerned, for example, we would know nothing."

A Developed and Diversified Industrial Country

Tunisia is a predominantly urban country. Life expectancy exceeds 74 years. Close to two-thirds of Tunisia's population lives in cities, against an average of 43% for so-called developing countries (Source: Coface, 2007). Tunisian social production is firmly oriented to industry. In 2009, the distribution of GDP was as follows:

- manufacturing, 17.6%
- non-manufacturing industries (mining, energy, electricity and construction), 17.4%
- agriculture, 11%
- tourism, 6%
- communications, 6.6%
- transport, 6.4%
- distribution, finance and state services, 35%

In 2006, the distribution of GDP had been as follows:

- manufacturing, 18.9%
- non-manufacturing industries (mining, energy, electricity and construction), 14.4%
- agriculture, 12.3%
- tourism, 6%

---

3 Florence Beaugé ; La Tunisie de Ben Ali. Miracle ou mirage ? Éditions du Cygne
communications, 5.5%
transport, 6.4%
distribution, 11%
finance, 11.1%
services provided by the state, 14.4%.

If we rely on these data and cross-reference them, we arrive at a productive sector of new purely capitalist value accounting for at least half of GDP. In terms of capital intensity, Tunisia has been advancing at a forced pace with a rate of productive investment (purchases of new capital goods minus write-offs of old capital goods; economics called this “gross fixed capital formation”) constituting nearly 27% of GDP in 2010, according to the IMF.

The increase in the technical composition of manufacturing can be read between the lines in the distribution of manpower. In 2009, 31.9% of the employed population worked in industry, mining, energy and construction, as opposed to 48.9% in trade and services (including productive services) and 17.9% in agriculture and fishing. Moreover, despite ten years of strong growth, including during the two major global crises of valorization in 2000-2001 and 2008-2009, the official rate of unemployment remained stuck at 14/16%, manifesting growing labor productivity.

The Tunisian work force is, generally, rather disciplined and well trained, as foreign employers are happy to report. The Global Competitiveness Report for 2010-2011 places Tunisia in 7th place in its rankings measuring the availability of scientists and engineers, with France ranked 12th, Belgium 13th, Germany 27th, Italy, 54th, or Egypt and Morocco, 25th and 46th, respectively. The same report moved Tunisia up to 20th place for the quality of its education, better than France (29th), Germany (18th), Morocco (105th) or Egypt (131st). The Agency for the Promotion of Foreign Investment (FIPA) claims: "At a comparable level of qualifications and skills, Tunisia offers competitive salary costs in proportions ranging from 1 to 5 when compared with European countries.” Finally, on this point, the Davos Report indicates Tunisia is ranked 32nd in global competitiveness, ahead of Italy (48th), Turkey (61st), Egypt (81st) and Morocco (75th). In comparison, France, Germany, Belgium and Spain are 15th, 5th, 19th and 42nd, respectively.

The infrastructure is adequate. Nine airports with a capacity of 19 million passengers per year and more than 1,400 weekly flights connect the country to Europe (more than a third with France). More than 8,000 ships each year load and unload goods in Tunisian ports for a tonnage of 31 million in 2009. The port and airport infrastructures were considered the 41st best in the world for the former and 30th for the latter. The Tunisian railway network covers the country from north to south and extends over a length of 2256 km. The road network consists of 20,000 km. The third of the population uses the Internet, with 381,982 subscribers in 2009 as against 128,352 in 2007. Total telephone density per 100 inhabitants is 105.2%. Total energy capacity is 3314 MW.

For each age group, the report indicates the number of engineers and scientists available, i.e. having completed their education.
Foreign capitalists are well aware of opportunities for valorization in Tunisia, especially since Ben Ali's regime offered them a "total exemption from income tax for ten years for export earnings and for agricultural projects, and for five or ten years for projects located in areas of regional development, according to priority of the region." The regime also offered them "investment bonuses equal to 8%, 15%, or 25% of project costs, capped at between 320,000 and 1 million Tunisian dinars (one dinar = € 0.5122 on March 27, 2011), according to the priority area, in regional development areas and 7% for agricultural projects", not counting "support for all or part of employer contributions for employment created, according to the region." The Tunisian government also offered to cover the costs of projects for regional development at between 25.50% and 75% of the total cost of “infrastructure, depending on the priority of the region” (Source: FIPA-Tunisia). “A renovated and modern tax law, in constant evolution”, as the Economic Mission of the French Embassy in Tunis enthused. As a result, in 2008, 27% of the productive investments in Tunisia were made by foreign capitalists, as against 9% in Morocco. The progression was spectacular: in 2005, they totaled 1,088,000 dinars. Four years later, they had risen to 2,357,000 dinars. At the end of 2009, 3,069 foreign or mixed companies were operational in Tunisia, employing 314,299 people, as opposed to 455 companies with 59,932 employees in 1987. In 2009, 34% of these investments were in manufacturing, 54% in energy, 7.5% in services, 3.8% in tourism and real estate and 0.7% in agriculture. Within manufacturing, the share of foreign productive investment in the mechanical sector, in electrical construction and in electronics jumped from 5% in 2000 to 27% in 2009. In the textiles and clothing, their share has remained relatively stable over the same period, at about 13% of the total.

For all sectors, the presence of the major foreign capitalists for 2009 is summarized in the following table:

Main sectors: textiles, electronics, electricity, aerospace

- France: 1249 companies, 110,000 employees
- Italy: 704 companies, 55,600 employees
- Germany: 267 companies, 48,000 employees
- Belgium: 214 companies, 22,000 employees
- United Kingdom: 88 companies, 11,000 employees
- Switzerland: 82 companies, 12,000 employees
- United States: 77 companies, 14,000 employees
- Netherlands: 77 companies, 13,000 employees
- Luxembourg 59 companies, 10,000 employees
- All Others: 252 companies, 18,699 employees
- Total: 3069 companies, 314,299 employees

The enthusiasm of foreign capital is also due, in the summary of the economic mission of the French Embassy in Tunis, to "... constitutional forms similar to those found in France"," an Incentives Code for investment, a strong framework of incentives for export", and “... a wide range of solutions available to exporters and their Tunisian partners" for
means of payment. But the main weapons of the government for capturing foreign investment are the cost and conditions for employing labor and low energy costs. The minimum wage for 40 hours of work per week is 235 dinars, and 272 dinars for 48 hours (July 2010).

**Tunisian Capitalism’s Resilience in Cyclical Crises**

The Tunisian economy passed through the global valorization crises of 2000/2001 and 2008/2009 without too much damage. Unfortunately, we do not have reliable information on the cumulative results of the various companies, which is the most important indicator, in our view, for identifying cycles of accumulation and crisis in capital. That is why we must refer to far less precise macroeconomic data on growth, including changes in GDP. If we look to the figures released by the IMF, real GDP growth merely slowed.

In the first case, the crisis hit home in 2002. GDP growth fell to 1.7%, preceded by an increase of 4.9% in 2001 and followed by a rebound of 5.6% in 2003. In the second case, things went even better. In 2008, Tunisia’s real GDP rose 4.5%. In 2009, it slowed to 3.1%. In 2010, there was a slight uptick to 3.8%. For 2011 and 2012, three months before the outbreak of the country’s social and political crisis, the IMF was forecasting a GDP growth of 4.8% and 5% respectively. In its report, published in September 2010, the Fund wrote that "Tunisia has weathered the global crisis; it has come through it with solid fundamentals that are largely the result of prudent policies in the past.” The report also supported the action of the Tunisian government: "The prompt and appropriate response of the authorities helped cushion the impact of lower external demand in 2009." The Washington-based Fund, in the same document, specified that "internal demand in 2009 was supported by strong consumption fueled by an increase in per capita income." Despite soaring global food and energy prices, the state and the central bank managed to stem the rise in consumer prices. The index of consumer prices did in fact increase by 5% in 2008 and 4.8% in 2009, but they showed an increase of only 3.7% in 2008 and 3.1% in 2007. These are rates closer to those of the central countries of the CMP (capitalist mode of production) than to those on its periphery. By comparison, in Egypt, the price index for consumption jumped 16.2% in 2008-2009 after advancing 11% and 11.7% respectively in 2006-2007 and 2007-2008. In April 2010, the IMF anticipated increases of 12% in 2009-2010 and 9.5% in 2010-2011. But the sky in Tunis was clouding over, in the IMF’s view. The international fund noted that, due to its heavy dependence on its troubled "European partners", Tunisia "will need to identify more dynamic sources of growth to significantly reduce unemployment, which remains important, particularly among young people." As a result of the slowdown in European growth, Tunisia's foreign trade fell significantly in 2009, erasing the gains of the previous year and increasing the trade deficit. Recent history says that the regime failed. It did not find new sources of growth, and unemployment, especially among the youth, did not decline. We will discuss the condition of the workers below.

As a good student of the IMF, Tunisia was preparing, before the outbreak of the proletarian revolt, to revive its long-term program of fiscal discipline, including a more
selective use of subsidies for retail foodstuffs (wheat and oil) and the restructuring of the pension system, including a rising contribution rate and an increase in the retirement age. Meanwhile, Ben Ali and his entourage planned to lower the tax on corporate profits and at the same time to raise the value added tax. As unconditional supporters of permanent fiscal austerity, Ben Ali’s “socialist” RCD had embraced this principle since its founding in February 1988. By inscribing this principle on its flag and holding to it without fail for more than 20 years, the party-state was set up within four months after the palace conspiracy. It was a constitutional coup d’état that brought to power Ben Ali, the future head of RCD. Ben Ali had ousted the sick, old Conducator Habib Bourguiba (84 years old at the time) for reasons of senility; at the time, he was second in command within the executive, as Minister of the Interior, and in the Destourian Socialist Party.

The 1990s: An Exceptionally Serious Fiscal and Financial Crisis

Ben Ali would justify his elimination of Bourguiba by the necessity of the establishing a regime based on "a multiparty system and a plurality of mass organizations," and to prevent a coup d’etat by the Islamists. The main cause of his seizure of power was more prosaic. The state, by far the biggest individual capitalist in the country, on the model of people's democracies in Eastern Europe, was at the time plunged into an extremely serious fiscal and financial crisis. It was imperative to put things right as quickly as possible, which was not possible until the flight of the autocrat, whose promises of liberalization had remained a dead letter.

From the first year of the Ben Ali era, the state asked for help and advice from the World Bank to manage the crisis. The task was not easy. It took time to overcome the decay of the economic and social formation left by Bourguiba. Eleven years later, in late 1998, public debt and debt guaranteed by the government still represented 80% of Tunisia’s GDP. In late 1997, as part of the financial crisis of the so-called emerging countries, foreign debt amounted to 62.5% of GDP, producing a public deficit of 4.2% of GDP. It was 4.9% a year earlier.

In 1985, state enterprises (30% of the value added of the country employing 33% of wage workers) were collapsing under the weight of debt and had multiple operating losses. Two years before the bloodless coup of Ben Ali, these losses and debts amounted to about 35% of GDP. To finance itself, the government increasingly had to resort to foreign capital. As a result, in 1991, interest payments accounted for 27% of GDP. Five years later, in 1996, the burden still corresponded to 21.4% of GDP and 43% of the state budget.

In a failed attempt to keep a high rate of profit, the nationalized banks were themselves overwhelmed by bad loans after extending all kinds of credits to unprofitable businesses. Even in 2003, bad debts accounted for 41% of total loans from nationalized banks. The so-called development banks, whose main task was the financing of infrastructure, sank run under the weight of dubious loans in 1998. These amounted to 67.5% of their total loan portfolios.
Private banks did not fare much better. In 1993, some 34% of their claims were of poor quality. These problem loans corresponded to 24% of GDP. The government and its donors, the IMF and the World Bank, decided to take the bull of the financial and fiscal crisis by the horns with the 9th Five Year Plan, for 1997-2001.

Industrial restructuring had begun 10 years earlier under the supervision of the World Bank. Now it was time for banks and the state to go on a diet. By 1998, the privatization of financial institutions was proceeding apace. About 80% of the bad debts of public companies and of the state were eliminated. To speed up the movement, the state executive established structures for private debt collection. The ninth plan alone was not sufficient to get the banks back on their feet.

The crises of 1997-1998 and 2000-2001 once again multiplied the number of dubious loans. By 2003, they represented 24% of total commercial bank loans. The government had to carry out a new fiscal tightening. But the results were slow to emerge. In 2005, while non-performing loans of banks were reduced to 21%, the Tunisian foreign debt amounted to the equivalent of 68% of GDP mainly because of soaring oil prices. The executive did not ease up, applauded as it was by its strong international partners.

By 2007, non-performing loans of the banks had decreased to 17% of total loans. The increase in hydrocarbon production offset the new surge in import prices of energy products. In 2009, GDP growth slowed but the state coffers and banks were in good shape. The IMF finally pronounced the financial sector solid, with only 13% of bad loans on bank balance sheets, at 58% of their face value for the corresponding provisions. Public debt represented less than 43% of GDP in Tunisia. Immediately, the international financial institutions set new objectives for the Ben Ali regime: bring down public debt to below 40% of GDP and reduce the public deficit to less than 2% of GDP. All this was to culminate in the full convertibility of the Tunisian dinar, scheduled for 2014. But these plans had not taken account of the class struggle.

As for the Ben Ali regime's corruption, there is not much to add to what is widely known. One might merely mention, in this regard, that the illegal export of capital (about € 1.3 billion per year according to the NGOs), the confiscation of land, the manipulation of public markets, the widespread patronage favoring clans and the families in power or close to the autocrat, did not prevent Tunisia from undergoing a strong capitalist development, touted as exemplary for the region.

In the intentions of former supporters of Ben Ali and the regime, corruption is the rotten tree that is supposed to hide the forest of the valorization of capital and development and of exploitation in the country. "In 2011 and probably in 2012, there our financial needs will peak, both in the budget and in the balance of payments. The amount will depend on the rate of growth and on tourism. But we know that our funding requirements are between $3 and 4 billion" said Mustapha Kamel Nabli, governor of Tunisia’s central bank.

bank, in an interview with the Wall Street Journal, April 15, during his participation in an IMF panel. According to the Journal, the Tunisian government is seeking to attract foreign investment while launching a development program for infrastructure and to help young graduates to find jobs.

Situation of the proletariat

If Tunisian capitalism is thriving, the working class long ago lost all hope of seeing its condition improve. This sentiment is reflected in a 2005 survey by the Tunisian National Institute of Statistics (INS) of unmarried young people between the ages of fifteen and twenty-nine: nearly 2 million of them, 76% of the total, said they wanted to emigrate if the opportunity arose. Comparable figures were only 1.1 million people (45%) in 2000 and 457,000 (22%) in 1996.

The decline in purchasing power is also visible in the indebtedness of the active population. A study conducted in 2007 by the INS showed that 18% of the active population was in debt. The total amount of credits had doubled in four years. Within this, the share of consumer credits had grown incessantly.

Without claiming to cover all industries, we present here a non-exhaustive overview of monthly wages in a good number of professions. These salaries are given as net averages, excluding bonuses and benefits.

Category/Average Monthly Salary in Dinars

Medical Doctor (GP) 1000
Nursing 500
Worker 250
Teacher 600
Judge 1 300-2 000
Journalist 400-600-1 000
Bank CEO 2 300-9 000
Manager of Private Small/Medium Firm 1 500-5 000
Manager of a public company 2 000-3 000
NITC Engineer *
(* New Information Technologies and Communication) 800-2000
Secretary 250-400
Bus driver (public) 450
Bus driver (private) 250
Police Officer 350-400
Bank Employee 600-700
Bank Manager 900-1300

Since the minimum monthly wage is about 250 dinars, it is women that are over-represented in manufacturing employment. Such a wage level keeps most young graduates away; the employment prospects are not up to their expectations. Those under 30 represent nearly half the Tunisian population. Unemployment is essentially youth unemployment: 2 out of 3 unemployed people are under 30. In 2009, unemployment among 15-24 year olds remained high (31.3%) by comparison with to people 50-64 years of age (2.8%), as Elachhab Fathi, Professor at the University of Sfax, attested at the beginning of January 2010. Some 21% of graduates are unemployed. Only 5% of people without education are unemployed. "The graduates of higher education represent nearly a quarter of the unemployed (19 to 20%) and educated women are most affected (among unemployed university graduates 28% were female as opposed to 13% male; 60% of students are female", Mongi Ben Chaaban, Professor at the University of Tunis, declared in January 2010 (7).

Here is a long explanation by Professor Fathi Elachhab:

"Since the 1980s, productivity in Tunisia has been changing markedly, after which GDP growth in the 1990s greatly increased. However, the creation of employment has not followed a similar trend, and this is explained by the lowering of growth in jobs, as shown by the accelerated growth of the ratio of production to the number of jobs. During the 1980s and in the early 1990s, it was the service sectors that contributed most to the enrichment of job growth. Moreover, the share of services in employment in the non-agricultural sector increased during the 2000’s to 47%, continuing the upward trend which started in the 1980s. Figures on the elasticity of employment relative to growth show that the period 2005-2008 is rather unique: it records its lowest level since 1987. One can thus understand, now that growth in Tunisia is less job-rich than it was during the 1980s, that it is necessary to 'create’ more growth in order to reach the same rhythm of job creation.

This change is better explained by structural factors rather than cyclical factors. During the 1990s, the unemployment rate rose fairly significantly from 15.2% in 1990 to 17% in 1998. After that, the rate of unemployment declined steadily, reaching a value of 14.3% in 2008, a decrease of nearly three points. A demographic transition is the main explanation for this. Indeed, until 2004, unemployment fell on average by 0.4% each year, mainly due to the growth of the active population (2.3%) at lower rate than that of employment. This reflects a growth in the population of working age of 2.4% on average per year, offset in part by a decline in the participation rate of 0.1%. The observation of changes in the rate of exit from unemployment, measured as the ratio between the number of people exiting (through job placement) compared with the number of registered job seekers, shows that the possibility of finding work does not depend on the economic situation as recorded. Thus in many phases of conjunctural improvement, the rate of exit from unemployment does not react to an
improvement in the economic situation.”

In other words, the accelerated capitalist development in Tunisia, the rapid increase in the productivity of social labor, and the shift in its productive structure toward industries that require relatively less labor than traditional manufacturing, has played a central role in the stagnation of the unemployment rate at relatively high levels. The restructuring of the state has also helped reduce, relatively, access to jobs. Paradoxically, the long-term existence of a social safety net that is more solid than those of neighboring countries has made proletarians less flexible and less resigned to accept appalling working conditions.

The health care system, here the words, certainly triumphant in April 2009, the Economic Mission of French Embassy in Tunis put it in triumphalist terms, but not without indisputable figures:

"The social security system has reached a coverage rate of 92% in 2008. Health indicators reflect the success of health policy in Tunisia: life expectancy rose from 70.3 years in 1990 to 73.6 years in 2008, and infant mortality fell from 51.6 ‰ in 1987 to 19.5 ‰ in 2008. Mandatory immunization rates in young children reached 95% in 2008. In addition, various health programs have made possible the containment of several infectious diseases such as tuberculosis, as well as treatment for AIDS patients. However, the challenge ahead remains the control of diseases related to individual behavior such as diet, including diabetes, obesity, cancer and cardiovascular disease."

The local production of medicines, produced by thirty laboratories, provides between 42 and 45% of the market supply.

Manufacturing Industries in Tunisia

According to official statistics in November 2009, there were in the country 5756 companies employing 10 or more workers. The textiles and clothing sector (TCI) is the foremost, with 36% of companies, followed by agribusiness and food, (18%) and then machinery and metallurgy, 10%. No less than 48% of these companies are exclusively oriented to exports. All told, 484 895 wage earners work in them, with 41% in textiles and clothing, 14% in food, 13% in the electrical industry, electronics, and appliances and 7% in machines and manufacture.
France is the largest foreign investor in partnership companies (43%) followed by Italy (29%), Germany (9%) and Belgium (7%). These partnership companies are heavily represented in textiles and clothing (60%), electronics (11%), machines and manufacture (9%) and building materials, ceramics and glass (8%). Between 2004 and 2008, the value of manufacturing production jumped from 26.29 billion dinars to 43.765 billion, posting an average annual increase of 14%.

The value in textiles remained stable, reaching 5.364 billion in 2008 with an average annual increase of 1%. The first sector in value terms, the food industry, has increased 10% to 9.927 billion. The highest increases are those in the chemical industry (33%, to 8.858 billion), electronic and appliances (+21% to 4.356 billion), leather and footwear (17%, to 5.681 billion) and machinery and manufacture (+14% to 3.706 billion).

Investment in manufacturing, 1.837 billion dinars in 2004, remained slack during the next three years, before jumping to 3.258 billion in 2008, increasing in one year by more than 50%. Aircraft construction, up to now mostly in wiring, moved up to the construction of frames with the establishment of Aerolia in December 2010, which by 2014 will have an industrial park and 750 sub-contractors in Tunis. This sector currently employs about 5,000 workers, primarily in French companies, five times more than a decade ago.

In 2008, manufacturing accounted for 79% of exports of goods from the country, a stable rate since 2005, when it was 82%. However, foreign trade in manufactured goods is clearly in deficit, with a coverage rate of 82% in 2008. It was only 71% for aerospace and only 26% for machines and manufacture. The main surplus sectors are the textiles leather and footwear, ceramics, and to a lesser extent, electronics and appliances.

**The economic consequences of the events**

The following gives the figures for unemployment (between 500,000 and 600 000 more unemployed in 2010), for growth (around 1%, according to the latest IMF estimates) and the different foci of government policy in the coming months, namely regional development, social support and economic revitalization.

According to French daily Les Echos, foreign direct investment (FDI) in Tunisia decreased by 28.8% in the first quarter of 2011, as indicated by the Tunisian Agency to Promote Foreign Investment. Foreign investment in the first quarter was 338.6 billion dinars (170 billion euros) compared to 475.6 billion dinars (239 billion euros) during the same period in 2010. FDI in sectors of manufacturing and energy is down 23% and 30.8% y-o-y, respectively, in the first quarter. Foreign investment normally generates about 25% of new job creation annually, and constitutes a major contribution to the development effort of the country. Minister of Finance Jalloul Ayed presented a grim economic picture of the country, indicating growth between 0 and 1% and job creation more than three times lower than that originally intended.

The thousands of young people fleeing the country for Italy and France do not seem to believe in any imminent economic recovery or in any assistance from the Tunisian
government. They dream only of leaving for Europe.

Moreover, with the closure of the Tunisian-Libyan border, thousands of Tunisians living from exchange and informal trade (according to official statistics, the border village Ben Guerdane border alone has some 80,000 people whiplashed by the shutdown of trade with Libya), finding themselves overnight without sources of income. Moreover, the flow of thousands of refugees, both Libyan and foreigners fleeing the war in Libya, has made life even more precarious in the south.

Synthesis

As a good student of the IMF, Tunisian capital has achieved a modernization allowing it to become an industrial platform for large foreign companies, mainly European, seeking skilled workers to exploit, but at reduced costs.

These investments initially focused on textiles, clothing and leather, but have diversified into areas with a higher organic composition. In aeronautics, production took off, for example, in wiring, for example, before moving on to the construction of more complex plane frames, requiring a more skilled workforce. But this development remained localized on the coast, especially in the Tunis region. Financial and fiscal crises were gradually dealt with, but at the cost of an increase in social inequality. Economic development had not solved two major problems, namely youth unemployment, both of university graduates and others, and the economic underdevelopment in the interior. Unfinished land reform left the country at the mercy of the tensions on the markets for agricultural raw materials.

The beginning of the revolt, in Kasserine, combined all three ingredients.

HISTORICAL BACKGROUND

Brief overview (1956-2008)

We can divide the history of Tunisia since independence into several periods:

1956-1963: consolidation of power both with respect to France (the Bizerte affair); the jailing of regime opponents, the execution of Salah Ben Youssef (born in 1907, an opponent of Bourguiba beginning in 1955, sentenced to death in August 1961); the outlawing of the Communist Party in 1963.

1963-1969: the attempted statification of the economy under the rule of Ahmed Ben Salah (Secretary General of the UGTT in 1956, later a minister, deposed in 1969 and sentenced in 1970 to forced labor, finally escaped into exile) resulting in the establishment of agricultural cooperatives under state ownership, which failed because of the refusal of land collectivization (Ouerdanine riots, in the Sahel, in January 1969, where the police fired on protesters, killing a farm worker and triggering riots, with a dozen people killed in the ensuing repression) and because of the discontent of the people
working in cooperatives.

1969-1975: a liberal economic turn under the guidance of Hedi Nouira (1911-1993). Tunisia prepares to host the first foreign investment (investment code in April 1972). There is a slight loosening of the omnipotence of the PSD (Parti Socialiste Destourien, the party of Bourguiba), but Bourguiba takes matters in hand; the liberal wing of Ahmed Mestiri (1925) is purged from the PSD in January 1972, and Bourguiba is proclaimed president for life.

1976-1981: A repressive turn: repression against the strikes in Ksar Hilal in 1977, the riots of January 26, 1978, the reining in of the UGTT in 1978, etc.

On October 10, 1978, the workers of Sogitex (a state textile company) in Ksar Hilal trigger a strike against management "sabotage". They occupy the premises but are removed by the police. The next day the strike continues, the workers demonstrate and are joined by high school students. Hearing the rumor that a demonstrator was killed, the whole town comes out into the street. The police respond and make arrests. But the next day at 11:00 AM, the entire region turns out to support the workers. The police are overwhelmed. The state had disappeared. It is the army (armored cars and planes), with 500 men, which intervenes on the morning of October 14 to occupy the city. Confronted with this deployment of forces, the population pulls back. Order returns.

These events, in the city where the Neo-Destourian Party was founded in 1934, mark the beginning of the "political" offensive of the UGTT.

On January 26, the UGTT calls for a general strike and demonstrations across the country. The UGTT uses the discontent to tip the balance in its favor in its power struggles with the DSP. The strike is a success in Tunis and Gabes. Starting at 9 AM, demonstrators converge on downtown Tunis, including striking workers, the unemployed, students, etc. At 10 AM, the police intervene and the protests turn into riots. At 1 PM, when the police are overwhelmed, there are already 51 dead. At 2 PM, the government decrees a curfew overnight and calls in the Army. Habib Achour and the executive of the UGTT are arrested.

1981-1987: After a timid attempt at a political opening (elections opened to the opposition, legalization of the Tunisian CP), repression becomes the standard response to the crisis and to all demands (repression of the riots in January 1984, repression against the UGTT, the arrest of Habib Achour). Rise of Islamism.

On December 29, 1983, Prime Minister Mohamed Mzali (1925-2010) announces increases in the prices of essential commodities. In fact, the intention is to end state-"subsidized" prices in order to maintain a semblance of redistribution, but one from which the rich also benefit. In the first increase since 1968, the price of bread and flour is increased by 100%. Beginning in in the south on January 3, in Gabes, Kasserine, etc., riots break out in several cities, including Tunis. The UGTT is absent from the demonstrations. The unemployed, the precarious populations and poor farmers are in the
The government decrees a state of emergency; the police are overwhelmed. The army intervenes with armored cars. On January 6, Bourguiba announces the withdrawal of the measures. There are, officially, 84 dead and 900 injured, and 10 rioters are sentenced to death.

1987-1999: Ben Ali, Minister of the Interior of the last Bourguiba government, ousts him and promises the moon. In addition to an economic recovery through a new round of foreign investment (a free-trade agreement with the EU in 1994); this period is characterized by the fierce repression of the Islamist party Ennahdha, leading to the arrest of more than 10,000 of its activists.

2000-2008: repression and corruption are the two mainstays of the regime. Tunisia has thus reproduced the trajectory of many countries after decolonization. After an attempted political alignment with the Soviet Union or with the Arab nationalist bloc, resulting in a period of "socialization" which is nothing but an attempt by the state to substitute for the weakness of capital accumulation, the failure of this strategem results in a realignment toward the former colonial power and the U.S., and an opening to foreign investment. Faced with the first revolts, the regime uses the repression that it subsequently brings to bear against the Islamists, and once the situation is stabilized, it sinks into corruption and nepotism. However, Tunisia presents two unique aspects:

- The effort made since independence, and never abandoned, to invest in education, making the country one of the producers of quality university graduates, where illiteracy is marginal;
- The reaffirmation of secularism and of the place of women in civil society and the labor market.

**The Events in Gafsa – 2008**

In 2008, serious agitation and opposition shakes the Gafsa basin for more than 6 months, and especially the city of Redeyef. The unfolding of events is reported by observers on the scene. This region, whose only resource is the production of phosphate and its derivatives, had been affected by the mechanization and rationalization of work, which reduced the size of the Gafsa Phosphate Company (15,000 to 5,000 posts in a few years) by 75%. The unemployment rate is around 30% (+40% for the youth). The falsification, in January 2008, of the results of a competition for jobs at the company, as well as massive layoffs, set off the powder keg.

This time the injustice is no longer passively accepted; the unemployed, students, and laid-off workers decide to occupy the local headquarters of the Tunisian General Labour Union (UGTT) whose leaders are deeply involved in the deceptions that cover up special access to jobs for friends and family. Repression and arrests only cement the support of the rest of the destitute population for the protesters. In the struggles, many trade unionists in secondary education participate; some become iconic figures of the movement. Some demands are for more justice and for an end to nepotism, but they also
mixed with appeals to patriotism and for the development of the region, as the peaceful side of the ferment.

The population of Redeyef has a freer and more audacious attitude. Indeed, in early May 2008, police repression hardens, resulting in more victims and the encirclement of the city. The locals come together and decide to leave the city. It is the intervention of the unions, which negotiate a pullback of police repression with the state, making it possible to defuse the movement and to allow the return of the families which had already left. Needless to say, repression continued. While many activists fled into the mountains, most of the union leaders wind up in Ben Ali’s jails, where they continue fighting through the courts. The state gradually grants trials, which provide a forum for the prisoners, lighten the sentences, and finally the detainees are released in late 2009.

This episode was probably the ferment which made it possible for a part of the Tunisian state to draw up, together with numerous associations or opposition parties, a post-Ben Ali alternative. Those in Redeyef with nothing to lose, meanwhile, showed a determination which continued to manifest itself in recent events. We should note that despite its length, the conflict remained confined to the mining area, with the exception of a few riots that took place in early June 2008 in the governorate of Kasserine (which paid a heavy price during the recent uprising). In this area, there is once again a struggle within the UGTT between supporters of the PCD and the “rank-and-file” who support the movement.

**The RCD and the UGTT, the Two Pillars of the Tunisian State**

The Single Party

The RCD is nothing but the old official party from the Bourguiba era; the Destourian Socialist Party was renamed in 1997 (and was a member of the Socialist International). The RCD was expelled from the Socialist International on Jan. 18, 2011. This party, which claimed more than two million members out of a population of ten million, was not only a party “to which one had to belong in order to be able to work,” but was a real political force which gathered under its root the influential people of Tunisia, CEOs, and politicians

Networks of the former party would continue to work for a while, either in the shadows or in new political formation, although it was dissolved on March 9 2011 by court order.

**Socialism in Tunisia and the UGTT, the union-party (1961-1969)**

The other political force is represented by the UGTT, the union federation claiming more than 500,000 members, which is a real party and since its founding in 1946, has been competing with the official party. It is useless to consider the UGTT an advocacy organization of workers whose ties with state power constitute a betrayal by the
union bureaucracy. The UGTT represents a political current of that part of the ruling class which favors an economic policy under state control.

Its propensity for participating in the management of capitalism in Tunisia has been confirmed throughout of its existence. The most important experience undoubtedly began in 1961, when Ahmed Ben Salah was appointed minister, to implement the policy that he himself had drafted at the 1956 congress when he was Secretary General of the UGTT. This policy involved the nationalization of virtually all of the economy. Of course, political change at the top was not made democratically and Bourguiba in 1969 put an end to this orientation in 1969 in an authoritarian manner. This federation has always tolerated in its midst unions taking more or less radical positions, and has never found itself in danger for doing so.

Unionization, at least in state enterprises, is very significant in Tunisia; for example, in 2009, the unionization rate at the post office and in telecommunications was about 50%, and was on the order of 70% in secondary education. After independence, the growing importance of the UGTT in economic policy, through the actions of its secretary general, Ahmed Ben Salah, pushed the country toward the adoption of collectivist economic measures. In 1961, the political leaders opted for this strategy and began to expand state control in all areas of the economy.

This shift is marked by two important decisions; the first is the creation of a large Ministry of Planning, to which the Ministries of the Economy, Finance, and Agriculture, as well as Trade and Industry are added. Ben Salah takes charge and thus has control over all economic policy. The second is the adoption of a development plan in force for ten years (1962-1971) , a plan based on the resolutions of the UGTT congress of 1956. The main objectives of this plan are economic decolonization, improving the living standards of the population, reducing dependence on foreign capital (and thus a more self-reliance) and the creation of a national market.

This phase sees an accelerated process of collectivization, especially in the agricultural sector. In May 1964, the National Assembly decrees the expropriation of land in foreign hands - owned primarily by Italian and French families- in order to create 300 state cooperative farms . France freezes all financial assistance to Tunisia, plunging the country into a serious economic crisis. In 1966, Bourguiba tours Europe, launching the negotiations which lead to the signing of an initial commercial agreement on July 28, 1969 in Tunis.

This was however a paradox, since the rate of collectivization by then reached 90% in agriculture. In August, the public sector includes wholesale and retail trade, a significant portion of industry and the banking sector; transport, electricity and mines were already under state control. Only the tourist sector was left to private management..

The UGTT has always faced a dilemma since the end of the 1960s: it must either assume the functions assigned to it by the state, and thus filter the requests of its members and defuse the demands of its base. Doing so, it is outflanked by the actions of regional and
local unions and by non-unionized workers. Or else it identifies itself with the social protests, if only to contain them. And then it risks running afoul of the authorities and undermining the interests of the union cronies of the regime.

In the 1970s, growth was accompanied by a change in social composition, characterized by the diversification and development of a skilled blue and white collar work force and and by a layer of young and dynamic entrepreneurs associated with the foreign capital. Growth was not benefitting the whole population. Regional disparities between the west and the Sahel coast on one hand, and between the north and the south on the other, as well as between town and country, were deepening along with social disparities. In January 1977, a social contract was drawn up by the various social partners – the UGTT and the employers association (Utica) - but also by the PSD (future RCD) and the government.

But the evolution of the conjuncture conditions alters the terms of the contract: starting in 1977, the sharp rise in consumer prices sets off "wildcat" movements. At the end of the year, the deepening of social tension impacts the structure of the UGTT. Habib Achour, the union's general secretary, resigns from the Central Committee of the PSD. On January 22, 1978, the Administrative Commission of the UGTT decides on a 24-hour general strike for January 26. The results: 400 injured, 51 dead according to official sources; the national leadership, including Habib Achour, arrested and sentenced; hundreds of activists and union organizers arrested all over the country. A pseudo-congress is organized to take over the union structures and install a new leadership, directly related to the PSD. But a war of position is organized to defend the autonomy of the union and, for the first time since independence, a break with the ruling party takes place. After this first social warning, the Gafsa affair (cf. above) occurs in January 1980. An armed commando group of Tunisians, trained in Libya but entering the country by way of Algeria, seizes the city as a starting point for an insurgency that which was intended to spread.

The choice of Gafsa is not random. It is indeed one of the cities where the urban crisis is simmering most acutely, crystallizing all the spatial and social imbalances in Tunisia. For Bourguiba, the warning is serious, and in March 1980, he sets in motion a controlled process of greater social and political opening. The state allows the UGTT to proclaim its independence. A period of calm in 1981-1983, marked by agreements for wage increases, ran up against the worsening economic situation and the implementation of the Sixth Plan (1982-1986), in the context of a pullback by the state and a policy of true prices.

In October 1983, the state decides to remove the subsidy for cereals and related products, beginning in 1984. The result is a doubling of their consumer price. In the last week of December, the government formally announces its decision. Riots, known as the "couscous revolt", begin in the south, spread throughout the country, and reach their climax in the capital. The demonstrators target symbols of luxury and the state. The regime is forced to use the army. There are dozens of deaths and hundreds of injured. Finally, Bourguiba decides to cancel the increase and restores calm.

Nevertheless, while helped by a good cereal harvest in 1985, the government cannot to
curb the balance of payments deficit. It decides on the necessity of a severe wage freeze, which is met with the hostility of the UGTT. Strike actions resume in August 1985. The government, helped by the anti-Libyan consensus which arose in reaction to an expulsion of 30,000 Tunisian workers from Libya, decides to bring the union to heel. After forcibly ousting all the regional leaderships and again sentencing Habib Achour to years in prison, and after having stripping the legitimate leadership of all its resources, the PSD can then, in January 1987, organize in an extraordinary congress of a normalized UGTT. The autonomy won and recognized in 1981 is over. The regime has cut itself off from its main channel of communication with civil society and from its main safety valve.

**OTHER FORCES IN PLAY**

**The army**

The Tunisian army has neither the military, economic and political significance of the Egyptian and Algerian armies, nor the civil war experience of the Algerian army. Nonetheless, despite its modest size and weight, it appeared during the events as a force for stability, apparently independent of the power of Ben Ali, and even as a force for change.

Formed at independence, on 20 March 1956, from a staff of 9500 soldiers and officers taken over from the French army, the army in 1972 already had 20,000 men, with an additional 10,000 men in the paramilitary forces. During this period, its single exploit was its inability, in 1961, to recapture the naval base at Bizerte, which was still occupied by the French army.

Today, the branches include the following numbers:

<table>
<thead>
<tr>
<th></th>
<th>Army</th>
<th>Navy</th>
<th>Air Force</th>
<th>Paramilitary</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>27,000</td>
<td>4,500</td>
<td>4,000</td>
<td>9,000</td>
</tr>
</tbody>
</table>

Equipment:

- 143 combat tanks
- 355 light armored cars
- 27 fighter planes
- 16 transport aircraft
- 57 training aircraft
- 30 helicopters
- 50 vessels (including 23 light and medium patrol boats).

There are, in all four services combined, ten ranks of senior officers, five ranks NCOs and four ranks of enlisted men. Military service has been compulsory for men since 1957 and since 2003 for women but only 30% of each age cohort actually undergoes it. The Tunisian army has not had a chance to perform brilliantly in any war against its powerful
neighbors, Algeria and Libya, but has participated in numerous international operations for the UN (Africa, Asia and Kosovo). However, in January 1980, it recaptured the town of Gafsa when it was occupied by opposition forces supported by Libya. Domestically, it intervened in October 1977 in Ksar Hellal and in January 1984 in Tunis. Since then, the army has absented itself, which gave it a prestige for its neutrality, one that improved further when it refused to participate in the repression against demonstrations. It appears as a guarantor of both stability of the process of change.

The Islamists

Ennahdha (Renaissance Party) is by far the most important Islamist political party. Formerly known as the Islamic Tendency Movement (ITM) from 1981 to 1989, it had won 17% of the votes (some say even 30%) in the legislative elections of 1989. Tolerated in the early years of Ben Ali’s regime, its supporters underwent fierce repression after those elections and after the electoral victory of the FIS in Algeria in June 1990, allowing Ben Ali to conjure up the specter of Islamism.

Its founder Rached Ghannouchi went into exile in London in 1989, after the legalization of the movement. Between 1990 and 1995, 30,000 of its members were imprisoned and tortured. Most activists were released in 2004. In the 1990s, the only oppositional figure who supported the Islamists was Moncef Marzouki, president of the Tunisian League of Human Rights (TLHR), spokesman for the National Council for Freedoms in Tunisia, and president of CPR (center left) beginning in 2001.

Themselves victims of the repression, the opposition parties (secular and democratic left) gradually opened a dialogue with Ennahdha. They went as far as to form, in 2005, the October 18 Coalition for Freedoms, an alliance of Progressive Democratic Party, the social democrats of the Democratic Forum for Labor and Freedom, the PDP of Najib Chebbi (liberals and former "Marxists"), the Islamist Ennahdha and the PCOT (Communist Workers Party of Tunisia), along with some associations and still more minority parties.

The thousands who came to welcome Rached Ghannouchi at the airport when he returned from exile easily overshadowed the hundreds of opponents of the values of the Islamic Party. Legalized in early March, Ennahdha has thus reemerged. On March 6, several hundred supporters gathered in the Ezzahra neighborhood in the southern suburbs of Tunis, to attend the first public demonstration of the party. Speeches and notable guests such as Ali Ben Romdhane, the UGTT general secretary and himself close to Ennahdha, were on the program. Veiled women on one side and men on the other kicked off the campaign for the elections to the Constituent Assembly.

Even though Ennahdha played no role during the uprising, it could benefit from the divisions and from the little visibility of the sixty parties running candidates in the elections on July 24. During the uprising, Ennahdha remained discreet and moderate (arguing in particular for the principle of gender equality in the future Constituent Assembly) and was legalized after a 30-year ban. Beginning in February 2011, an
opinion poll gave Rached Ghannouchi, the Islamist leader, 1.5% of the vote.

It is nonetheless hard to know what will become of the organization; this is how Nicolas Beau, a Tunisia specialist, describes the situation: "It is true that only the Islamists seem to have a clear strategy; they passively enter the UGTT, the only known and recognized real force in the country; they create multiple parties as their fronts. They move into the social arena, particularly in the south. Further, Saudi Arabia with one hand protects the former dictator, who fled to Jeddah, and with the other hand financially aids Racheid Ghannouchi, the leader of Ennahdha. Ghannouchi issues soothing statements at every occasion. Local demonstrations against the arrival of Hillary Clinton or for closing brothels keep the Islamist flame burning."

In the view of the researcher Pierre Vermeren, "there is a strong Islamist sensibility within the population: the religious discourse, moral or moralistic, feeds on the denunciation of corruption and the economic behavior of various mafias. The soil is very favorable” and "Tunisia is subject, like all countries in the region, to the ideology promoted by the major Gulf media "(including, among others, Al Jazeera).

What is certain, however, is that the Tunisians who identify with traditional and religious values are increasingly assertive. The most visible outward sign is the growing number of women who wear the veil. Beginning in 2004, more and more women began wearing the veil, defying the repression of the Ben Ali forces, and imposing their will on various administrations. Sales of Islamic clothing have expanded significantly. Today about 30% of women are veiled. By contrast, those who remain committed the values of the emancipation of women are rarely seen. On January 29, 2011, only one hundred of them marched in Tunis to demand gender equality and secularism.

Another variant of political Islamism is the Hizb ut-Tahrir, which presents itself as a non-violent organization, and is fairly active in Tunisia. It was born out of a split from the Muslim Brotherhood. This movement operates in over 70 countries and several million members and supporters. Its purpose is to establish a new caliphate and Sharia across the Muslim world. This movement has not been legalized by the transitional government.

**Political parties**

Some opposition parties were allowed under Ben Ali but were only trial balloons; in fact they represented only very limited circles, and only in Tunis; in short, a fake opposition.

Today, there are: the Movement of Socialist Democrats (MDS) of Ahmed Khaskhoussi; the Popular Unity Party (PUP); the Pan-Arab Socialist Party of Hassine Hammami; the social democrats the Progressive Democratic Party (PDP) of Maya Jribi; the Social Liberal Party (SLP) of Hosni Lahmar; the Unionist Democratic Union (UDU), the party of Ahmed Inoubli; the Democratic Forum for Labour and Liberties (DFLL); the Social Democrats of Mustapha Ben Jaafar; and the Green Party for Progress (GPP), an ecological party, led by Mongi Khamassi; Additional parties include Ettajdid (Renewal, the former Tunisian Communist Party), a
center-left party and two left groupuscules; the Party of Patriotic and Democratic Labor (PPDL) and the Communist Democrats (CD), who were the only ones who demarcated themselves, in 2006, from Islam by declaring their "absolute refusal of any joint action with the Islamists”, the protagonists of a project based on the manipulation and exploitation of religion." According to figures provided by the Tunisian Ministry of the Interior in late April 2011, 63 new parties had been created since January 14 and this figure will be revised upwards, given that there are currently 49 pending applications. The ministry said that 66 applications were been denied by his office because they did not meet legal requirements. That said, there is no need to worry; after the death of Franco, the number of parties fielding candidates in the Spanish elections was about 300.

The offensive of U.S. diplomacy

For years, the U.S. supported authoritarian regimes in the Middle East to ensure stability in the region; however, things have changed. If the first signs were visible under the presidency of George W. Bush (speech November 6, 2003), the policy turn became clearer when Obama arrived in power. He has continued, in all his speeches in Africa, but also in the rest of the world, to advocate democracy, as he did in his speech in Cairo on June 4, 2009, during which he also called on youth to "remake this world." It is therefore not surprising that starting on January 14, 2011, the American president has taken the side of the demonstrators and renewed his call for democracy and for elections.

All this came down to support work, throughout the duration of uprising in Tunisia, and to taking up the cause of the demonstrators. And this was also true for Egypt, even though it was an ally. This attitude contrasts with that of French diplomacy. Two days before Ben Ali fled, the Minister of Defense offered him the expertise of his police, to manage the uprising, in a desperate attempt to save the regime. The former colonial power supported the authoritarian regime until the last moment, not wanting in any way take the risk of compromising business ties.

In pain, and with a cabinet reshuffle, the French government made an 180 degree turn to align itself with the U.S. position. This policy change opened a period when the U.S. put pressure on its former allies to install democratic regimes, calling into question its former alliances in the Middle East.

Washington's foreign policy recognizes gives the reality of regional instability and runs the risk of even initially amplifying it. This is why it causes gnashing of teeth among the other major countries of the capitalist world. Its objectives are, in the medium and long term, the consolidation of capitalist domination in a destabilized region, increasing U.S. influence and modernizing states swept up in the wave of rebellions by enlarging their social base and extending the governance of bourgeois law. The dominance of bourgeois law makes it possible to allows it to separate the permanence of the state from the vagaries of the political personnel who periodically take over or lose control of the the executive.

The "new"American diplomatic shift returns to the foundations undermined by the Cold War and by the need to conduct a foreign policy determined by the single and necessarily
reductionist logic of forming anti-Russian fronts and alliances. But this policy is certainly not universal. The United States is not willing to entertain regime change in Saudi Arabia, for example. Its position in Bahrain, where it asks the protesters to come to terms with the regime, is the Achilles heel of its new stance in the Middle East.

The sudden departure from Tunisia of thousands of young proletarians, taking advantage of a relaxation of border controls, is the most obvious sign of their position, which remains essentially defensive. It also signals a practical defiance of the promises made by the capitalists of the entire world and by the new masters in Tunis. Understanding the new geopolitical situation is essential for the emergence of an independent and autonomous labor movement in the region.

**Working-Class Demands and Libertarian Aspirations**

The tension over employment we described earlier, and especially among young graduates, fed into a ferment that was not taken seriously by the state, whose sole response was repression. In Tunisia, a personal recommendation was the rule for access to any type of job. The system of corruption and blackmail over jobs made it possible to divide proletarians for decades. The omnipresent police, unsanitary prisons, the bullying of relatives and torture in the police stations rounded out the system designed to crush even the bravest.

On the other hand, the state was engaged in tracking down the flourishing informal economy, in order to increase tax revenues. This practice involved harassment of a large part of the population, from factory workers to business people, by way of the unemployed. Episodes of protest broke out and challenged the repression. In August 2010 in Ben Guerdane, the announced closing of the local border to stop trafficking resulted in a general revolt of the entire population. The police got their revenge by vandalizing, one by one, the shops in the city and making massive arrests. In spite of this, the state pulled back and the border was reopened.

Following the immolation of Mohamed Bouazizi, the first clashes and demonstrations from December to early January focused on demands related to the labor market and the high cost of living. Whatever the limitations of such demands (the right to work is not a communist slogan), they emerged directly from the Tunisian working class and particularly from its poorest strata, living in the less developed regions of the country and experiencing a high rate of unemployment.

In addition to the formal demands, during various displays of anger, there were acts of reappropriation, by looting, which are the immediate implementation of these demands. The latter have an economic and defensive origin: they appear in response to the global crisis (rising food prices in the region) and to the state of the labor market.

Nonetheless, the first moment of the movement, once it took hold, made it possible to move to political and offensive demands. Even before they were raised, the succession of illegal demonstrations and clashes with police raised practically the questions of
democratic freedoms and the confrontation with an authoritarian state. This ability to channel the movement of libertarian aspirations, till that point merely diffuse in the population, made their expansion beyond the poorest workers to other sectors: workers with less precarious situations, lawyers, the commercial petty bourgeoisie etc.

The defensive movement born in the working class was slowly transformed into a strictly political movement within civil society. If the workers' demands, far from disappearing, remain a driving force in their places of origin, they move into the background. In the foreground, there is a convergence of libertarian aspirations onto one single demand: the end of the Ben Ali regime. One fraction of the ruling group was able to understand the limits of this demand: they prepared to get rid of Ben Ali, not merely to save the state, but to strengthen it by a restructuring.

The announcement of the departure of Ben Ali had several effects. First of all, as a brake on the movement: the less advanced sectors were satisfied with what was seen as a victorious outcome, will leave the movement, and even turn against it in calls for order. Second, more radical elements moved on to the next level: getting rid of any leaders associated with the Ben Ali regime, beginning with Prime Minister Ghannouchi. Third, while the fight over state power in Tunis continues, a wave of instability shook all levels of society to its depths.

These last two points are transposed and crystallize in particular ways. On the one hand, the young demonstrators for democracy refuse any political recuperation. On the other, in the workplaces, the issue at hand is “getting rid” of the bosses; in high schools, getting rid of principals and teachers. The libertarian aspirations, having converged against Ben Ali and his regime, now spread in an anti-authoritarian sentiment. All other things being equal, these actions show the same limitations as the call "Ben Ali out" in January, transposing them to another level. Simply ousting leaders or corrupt bosses, without an autonomous will to transform society, only makes for restructuring and the replacement of one leader by another, in the medium to long term.

If we limit ourselves to seeing off a CEO, without touching the organization of work - unless we consider Tunisian management to consist only of parasites useless to production- it is obvious that replacing that organization will become necessary. Of course, we should also not reject this phenomenon en bloc. The ability to “get rid of” bosses is evidence of a certain level of the balance of forces in various workplaces, and tend to shift fear onto management’s side. Further, these anti-authoritarian expressions often seem linked to demand-based struggles in the workplaces.

The opening of a period of instability leaves the field open to all demands, particularly those of workers, including those who have not participated in the movement. According to Marc Mercier, head of Bonna Tunisie, a subsidiary of BTP, a French company, "During the revolution, the workers kept the factory. A week later, they demanded a 30% wage increase. A few days later, former members of the RCD, the UGTT and former employees were stationed outside the factory, saying "No one comes in!" The UGTT guys at the factory were overwhelmed by members of their own union coming from
elsewhere to make a better bid. The two sides even threw rocks at each other.”

Workers' struggles

Before the fall of Ben Ali

It is necessary to look at how the proletariat has handled its most natural weapon: the work stoppage, the strike. We can say that the strikes began to appear just after the fall of Ben Ali. Before, during the period from December to mid-January, we found no evidence of strikes. It was primarily the precarious proletariat or the unemployed that, in this phase, swelled the ranks of the agitation attacking the symbols of the domination of Ben Ali and opposing the forces of repression in the streets.

The more stable proletarians certainly participated in the demonstrations, but we found no instance where the cessation of production as such was used explicitly as a means to make the government cave in. This does not mean that production was not disrupted, but the fact was more the result of the curfew and the need for employers to keep the tools of production safe from possible damage, often helped by the workers themselves, as was the case with employees of Tunisie Telecom who defended the company offices, or employees of JAL, the leading European footwear business, which organized security shifts to defend the workshops against any damage.

After the Fall of Ben Ali

Starting in mid-January, the press began to report on strikes in the public sector enterprises but also, to a lesser extent, in the private sector. We can identify two reasons for understanding the development of this strike wave that lasted until the end of February. One was to put pressure on the choice of politicians. When the hegemony of the RCD was tottering and people were calling for the departure of the governors and other key figures of the regime, regional or general strikes were called by sectors in some districts. There was also the case of the successful strike, but one with purely political goals, at Tunisie Telecom in February, which derailed the listing of the company on the stock market. We can recognize, in this demand for nationalization, a favorite theme of the UGTT.

The other, more promising reason is that once the dictator was gone, the social reasons underlying the ferment found themselves at center stage. The demands were: enforcement of the laws on working hours, increased wages, and permanent status for the precarious. Subcontracting and insecurity of employment seem to have been particular targets. These few examples from the press are probably only a part of what happened. The workers of the Faurecia textile factory staged a sit-in January 28, 2011, demanding better working conditions, wage increases and the revision of employment contracts, whose duration is limited to one month or even 15 days. 360 women workers at Fleritex Export (a garment company) struck on February 3, demanding wage increases, the right to permanent status, social security coverage and the payment of overtime and bonuses on time. In a German assembly plant for
electromechanical components where workers struck, 1,500 of them gathered outside the headquarters of the company, demanding the regularization of their deplorable social and professional status, the right to a stable contract, salary increases and the abolition of subcontracting. The Tunis Africa Press Agency quoted several workers stating that the management of this company had been entrusted to people who for years had exploited the staff and forced them to work more than 12 hours a day, without overtime pay or any other remuneration.

Throughout the month, many other cases of work stoppages or strikes lasting several days were reported (the strike of temp workers at Shell and Oilibya, the strike and dock workers at the Regional Transport Company in Bizerte, the strike by employees Italian company L’Art du Soulier, the strike of the Tunisian Stevedoring and Handling Company, the strike in port of Rades, the blockage at blocking the Gafsa phosphate company.

If these movements seemed to slow in late February, this was undoubtedly due to the bargaining power of unions, which sometimes quickly concluded an agreement permitting the resumption of work. The employees of the Tunis city government, in a statement on February 17, praised the decisions just taken by their leadership granting permanent status to contract workers and temps.

They even decided to donate a day's work "to contribute to efforts at the national level to meet urgent social grievances." But in early April they went on strike for their permanent status. This case was not isolated and further strikes occurred in March and April. Even as the rhetoric of the government and trade unions was more than ever aimed at the resumption of economic activity, which had slowed at the beginning of the year.

On March 24, the employees of JAL, totaling 4500 in Tunisia, violently attacked the CEO of the company over the issue of wages, sequestering him for six hours. "Some workers tried to enter through the windows, and wanted attack me with a screwdriver. Honestly, it was very hard," he told AFP.

Management responded by temporarily closing the three production plants and suspending the payment of wages. Even though the employees returned to work after two weeks, the wage issue may return. "I’ve worked here for 12 years and I make only 300 dinars (€ 150). I don’t want an immediate raise I’d like to at least talk to the CEO about our situation," Fouad, a 47-year old worker said to a journalist. The bitterness was even greater because on January 15, the JAL employees were the first to return to work in the entire industrial area of Menzel (Bizerte). The CEO had promised them a bonus of 500 dinars.

Perspectives

The quality of what is happening in Tunisia lies in the fact that the ferment has not been limited to merely getting rid of Ben Ali, but is deeply rooted in the class struggle. We see the unity displayed by the demonstrators in January now giving way to a divide between
those who want everything and at once (democracy, pay, living conditions) and those who are pushing for the resumption of business as soon as possible.

The lockout at JAL in late March, but also those at the CFTP (Franco-Tunisian Oil Company) on April 2, 2011, at SITEM Electronics and at Union Africaine Garments, shows that the struggle will be tough, but the workers have mobilized to make their demands stick for a long time. Many Tunisian proletarians have chosen to do what all workers of the world have been doing since the beginning of capitalism, namely leaving for places where they have a better chance of finding work. They have therefore left Tunisia and are found by the hundreds in French and Italian cities. The welcome they receive contrasts sharply with the enthusiastic rhetoric one hears in those countries about the "Tunisian revolution".

CONCLUSION

For revolutionaries, recent events in Tunisia will long remain an important source of reflection. The richness and ambiguity of the popular movements that have shaken this small Mediterranean country and accelerated history in this major world region and beyond deserve close analysis by militants of the workers' movement. We therefore reject the falsely cut-and-dried, and in fact symmetrical, analyses of these movements as “purely proletarian” or “purely democratic”. The Tunisian proletariat is, far more than elsewhere, the real origin of the revolts throughout Middle East.

Its revolt against high prices, poverty and unremunerated unemployment made this upheaval possible. A rebellion involving only a few tens of thousands of people at the end of their tether in a forgotten area of the hinterland set off the powder keg. A fire that this same proletariat could not spread before, despite their past struggles at times at least equal in intensity to those of recent months, soaring food and energy prices, and the inability of the states in the region to quickly grasp the destructive potential of these movements, made the difference. The perception that the ruling classes are emerging faster and in better shape than workers from the financial and budgetary crisis unleashed class hatred.

The repression of very determined but, all in all, peaceful demonstrations did the rest. Instead of stopping the proletarians, this convinced them all the more that the only collective solution is in the street and that the only worthwhile fight is one that does not retreat when faced with the use of force by the state and its armed bodies. The riot and the attempted insurgencies become commonplace and are still marking the rhythm of social life in these countries. Every stratum of civil society which had no stake in the particular political form of bourgeois rule in Tunisia quickly joined the movement bringing to it disparate aspirations and demands, often conflicting with the original inspiration of a decidedly proletarian cast.

Repression became slicker, thus hampering any real class polarization within the movement. The lowest common denominator slid, over time, from the days of the the defensive struggle of violent eruptions by the proletariat against its degraded material
living conditions, to an interclassist battle dominated by the demand for political 
democracy and the rejection of "corruption" of the ruling group, a battle which also used 
illegal street mobilizations. The weak presence, in the revolt, of organized segments of 
the factory-based working class has certainly contributed to the dilution of the class 
struggle into the democratic struggle to streamline and modernize the domination of 
capital.

This does not imply that the workers in revolt have ceased to exist by themselves, or that 
they have stopped their advance to yield to their temporary allies. The social and political 
instability that prevails in Tunisia, the urge to get out of the country also expressed with 
rage and despair by tens of thousands of young poor people, the hopefully long-term 
weakening of the state, are all signals that indicate that the class struggle has not been 
extinguished and that its potential remains fundamentally intact. The presence of a 
factory-based working class, relatively larger than those of other countries in the region, 
aroused by the social agitation, is certainly a strong factor of hope. The tradition of 
combativity, never broken, in the country where it the whole Middle East ferment began, 
is quite another. Conversely, the absence of any autonomous expression by the 
proletariat, coupled with the successful facelift of an omnipresent union as well as the 
resurgence of an organized political Islam, imposes on the subaltern classes a terrain of 
political confrontation which is not their own.

The confiscation of the terrain of working-class politics carried out so far with a certain 
success by these two currents is now the main obstacle to be overcome. Surmounting this 
obstacle is in the hands of all proletarians in revolt, but the prime responsibility for the 
outcome falls to the factory-based working class. If they fail, in their autonomous 
struggles, to re-establish the politics of the rebellion, which means centering them firmly 
in the practical radical critique of the relations of production, such politics will never be 
fully political and will not, moreover, being efficaciously defensive.

The limbo of the short-lived riot, which forgets its specific social reason along the way, 
threatens the proletarian advance in this country.

This is more true in Tunisia than elsewhere, because it is in this country that the chances 
are best of simultaneously going beyond the defensive nature of the movement (which 
has been only partially taken up), as well as its politically hybrid and incomplete political 
form. We say in Tunisia more than elsewhere because there have been many such riots 
since 1978. Failing this, capital will achieve a more solid equilibrium because it will be 
built on a purely political, and absolutely not a military victory. In this case, and only in 
this case, can one include the recent struggles in Tunisia fully and definitively in the 
process of the democratic restructuring of the state.

To avoid this outcome, with the worst political consequences for the proletariat in the 
region, it is imperative to encourage any attempt to organize, even by a small minority, 
proletarian goals and anger in groupings which escape union control and which assert the 
working-class content of the movement. These political organizations of the base do not 
currently exist, because the most serious fighters for the class have allowed themselves to
be absorbed by the dynamics of direct confrontation with the apparatus of repression and by the work of purging the “corrupt” elements of the former regime. Instead of acting on the rock-solid basis of independent political struggle, the use of force by the proletariat becomes a substitute for such a struggle. Social pressure mounts, but the political safety valve established within the state and in the political and trade-union organizations remains in place.

Although it has been transformed and renewed piecemeal, this safety value is working very well. In this context, as in Egypt, the proletarians will most likely interpret the greater freedom they have won to put a ballot in the ballot box as a huge conquest. The key question is to know how long this expanded bourgeois democracy will succeed in sowing illusions. We have no answer to this question, but the simple fact that it can legitimately be asked is a huge improvement over the recent past.
